

Prof. J. Lederberg  
Dept. of Genetics  
Stanford University  
Stanford, California

Notice of Change of Address

Effective February 1, 1959

(c. Jan. 20 in fact)

The Genetics Department is a new division of the Medical School of Stanford University which is being consolidated in a newly constructed medical center on the Stanford campus. It will embrace fundamental research work on a variety of experimental materials including our continuing program of the genetics of bacteria.

Hi Leo

I've just turned into Smith & Bridges' paper in J. Exp. Med., August issue, which you must be getting just about now. A beautiful demonstration that maintenance of tolerance (to BSA) requires <sup>persistence</sup> administration of the antigen to rabbits. So there for stable Jones! Also a very neat paper (Archives of Pathology & <sup>Aug. 58</sup> <sup>Shenoy & Hall</sup> <sup>thymus</sup>) on use of anterior chamber of mouse eye for following transplanted cells. See what you mean about the values of this technique.

— Josh
